WEATHER OF CONCERN

Weather of Concern

- An early season Pacific storm system will be moving through Northern California this weekend. The main cold front will be moving through Friday evening through Saturday.
- The first rain of the season is expected over recently burned areas. This can cause ash and debris flow, clogging culverts, and leading to localized flooding.

Active Weather Warnings, Watches and Advisories by County:

- <https://alerts-v2.weather.gov/counties/CA>

Key Points

11/2 – 11/8

Thursday (night) - Sunday

- Wind, rain and mountain snow in the northern half of CA, with the heaviest snow in the higher elevations of the Sierra
- Rainfall may result in debris/ash flows around recently burned areas.

Monday-Tuesday

- Precipitation tapers off
- No significant impacts expected at this time

Wednesday

- Next chance for rain and mountain snow

WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

High temperatures in the mid 50s to 60s. Rain showers will move into Northern California Thursday night. Winds 5 to 15 mph, except increasing to 20-30 mph and gusts to around 35 mph across northern Sierra Thursday afternoon

*** Moist and cooler period next several days ***

The first in a series of Pacific troughs is poised to sweep over the region today. Precipitation, albeit initially light, will start along the coast and over the higher mountain ranges today and this evening. Precipitation will eventually spread over the entire area late tonight through Friday night with residual precipitation on Saturday across far southern and eastern. Wetting precipitation of a tenth of an inch or more is likely over the majority of the area although the lower Cascades and northern Sierra areas will be favored the most. Up to 3.5 inches of liquid water may fall over the northern Sierra during a 48 hour period. Snow accumulations are generally expected above 4000 feet although the more significant accumulations will be above 5000 feet. S-SW winds will also increase ahead of the trough. Expect gusts between 25 to 35 mph with locally up to 45 mph over the higher exposed ridges and across portions of the Sacramento Valley. Strongest winds will occur on Friday. Another Pacific disturbance is expected Sunday into Sunday night and should provide another round of precipitation. Cooler, higher humidity and unsettled conditions should continue well into next week with another system forecasted for midweek.

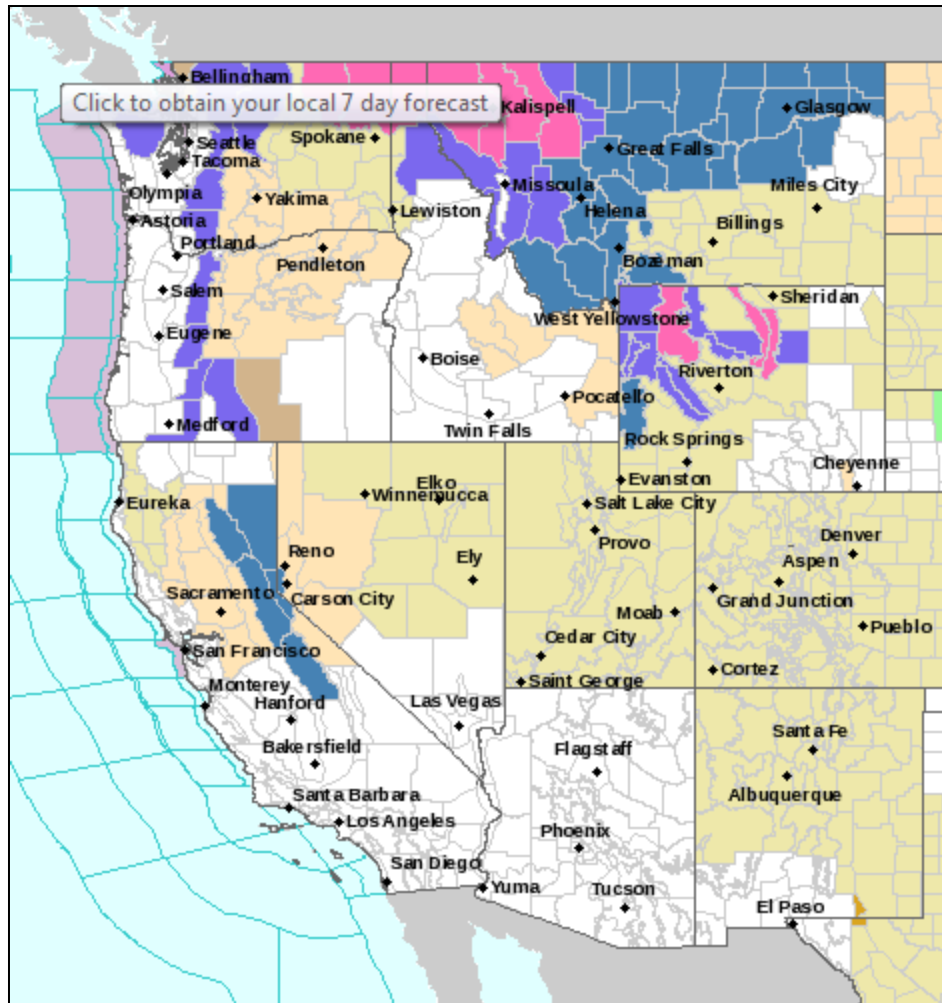

SOUTHERN CALIFORNIA

High temperatures in the 60s and 70s, with 80s in desert areas. Light rain showers will spread down Central Coast Thursday night and into the Southern California mountain locations by early Friday. Winds generally 10 to 20 mph with gusts to 30 mph for mountain and desert locations.

Cool weather over the weekend with rain likely over Central CA

A developing trough will produce cool, humid weather with abundant cloud cover during the next several days. High temperatures will change little through early next week with highs in the 60s along the coast, 70s in the inland valleys to the mid 80s in the low desert. Southwest winds of 15-30 mph will be possible each afternoon in and near the desert. The marine layer will be quite deep over Southern California, resulting in patchy night and morning drizzle through Monday. Central California will see a band of rain drop southward through the evening hours Friday, resulting in light precipitation for areas along the central coast and Sierras. This trough will dissipate before reaching Southern California. A second system may bring another chance of rain, mainly to Central and Northern California, Sunday night into Monday. Rainfall totals from the two systems added together may be over an inch in the Sierras north of Fresno County with lesser amounts across Central California. Southern California will likely see amounts under a quarter of an inch. Sunnier and weather may return next Tuesday or Wednesday, but another system may bring rain to the northern half of the state next Wednesday night or Thursday. No offshore winds are expected the next 7 to 10 days.
